

Werkstudent position for software developer

We are looking for a junior software developer with background in Computer Science or Bioinformatics to work in our founded start-up.

We are EpiQMAx, a GmbH in the Biotechnology Business Area. EpiQMAx offers a service to pharmaceutical companies and research institutes for the measurement of epigenetic modifications on histones and for general protein analysis using mass spectrometry. Our mission is to foster the realization of epigenetic tests to the clinics and help research laboratories on the decoding of epigenetic mechanisms.

The selected candidate will have the opportunity to learn about back-end and front-end development of our visualization tools.

The ideal candidate shall have/perform the following

- Requirements/skills: Bachelor degree in Bioinformatics/Computer Science or related. Intermediate knowledge of web-development programming languages (i.e., HTML; JS; PHP; PYTHON and SQL; knowledge of JAVA is appreciated).
- Duties: code plot-rendering functions, code data retrieving and parser functions from server side, and write API documentations.
